# Stabilized plants

---

## **Vision**

To bring preserved nature in new places and developing of this niche market.

## **Mission**

An extend of usage way of stabilized plants , through development and innovation.

# Stabilization process

## Process description

The preserved flowers are natural flowers who suffered a de-hydration process and then re-hydration. Water content from the flower is replaced with a liquid who seals her pores.

### 1. Cutting the flower

### 2. De-hydration

### 3. Re-hydration

### 4. Colouring

## Result

The result is a natural flower, with the look and texture of a freshly cut flow. Will keep her beauty for 18 month.

### 1. The look

### 2. Flexibility

**3. Life lenght** : flower`s life who is just cut now will last 5-15 days. The same flower if is stabilized will keep the beauty at least 2 years.

Day 3    Day 6    Day 8    Day 10    Day 12    Day 360
